FOR IMMEDIATE RELEASE

Aperture Adds Remote Terminal Support for Aperture VISTA™

New Support for Aperture VISTA Repository Administrator Improves Performance and Scalability

Stamford, CT – February 10, 2005 – Aperture Technologies, Inc., the global leader of enterprise software solutions enabling organizations to strategically manage their data center infrastructure, today announced official support for two popular remote terminal servers in Aperture VISTA™ versions 300 and 350. The Aperture VISTA Repository Administrator will now support remote operation through Microsoft® Terminal Server and Citrix® MetaFrame® running on Microsoft Windows® 2000 Server or Microsoft Windows Server™ 2003.

"Aperture's global customers require high performance and scalability in their enterprise applications," said Brad Zehring, Director of Product Management for Aperture Technologies. "Networks with high latency -- typically wide area networks or WANs -- pose a challenge to the successful operation of these applications. By leveraging remote terminal services where it's appropriate, Aperture is providing a high performance and scalable solution regardless of the overall performance of the network on which Aperture VISTA is deployed."

Benefits of leveraging remote terminal services on high latency networks include:

- Improved application experience -- actions performed via remote terminal services are typically faster compared to equivalent actions executed over a high latency network connection.
- Reduced network requirements -- only the user interface information is conveyed across the network.
- More reliable application to server connectivity.
- Reduced client hardware requirements.

Remote terminal server support is available now for Aperture VISTA 300 and Aperture VISTA 350, and support for Aperture VISTA 400 will be available in the second quarter of 2005.

About Aperture

Aperture is a global provider of enterprise software solutions that enable organizations around the world to strategically manage their business infrastructure. With Aperture solutions, companies increase operational efficiency and make better business decisions. Aperture software solutions utilize advanced visualization and work-process technology to help organizations optimize their infrastructure. Founded in 1987, Aperture is headquartered in Stamford, CT, with offices and partners located worldwide. For more information, please go to: <http://www.aperture.com>.
