Aperture Technologies Announces Fourth Consecutive Record Quarter

Company signs significant deals, expands operations and workforce to meet demand for data center management products

Stamford, CT, May 16, 2006 – Aperture Technologies Inc., the leading provider of enterprise software solutions that enable organizations worldwide to manage the physical infrastructure of their data centers, today announced its fourth consecutive quarter of record results for the third quarter of Fiscal Year 2006 (quarter ending March 31, 2006). The Company gained significant traction and momentum while carving out a leadership role in the market.

Aperture's consistent growth in revenue can be attributed to increased market demand for enterprise software that allows companies to manage, control and gain visibility into the physical infrastructure of the data center. Previously an overlooked part of data center management, organizations can no longer ignore space, power, cooling, storage and network demands without seeing a significant negative impact on data center reliability and operating efficiency. Aperture realized several key milestones in the third quarter which contributed to the record revenue growth for the quarter including closing three of the largest sales in the Company's history, expanding its service and development staff by over 10% and growing revenues from the sale of new software licenses by 250% over last year's third quarter. These increases are indicative of Aperture VISTA's acceptance as the leading solution of choice in the Data Center Infrastructure Management marketplace.

"We are extremely excited to report strong results for the fourth consecutive quarter," said Bill Clifford, Chairman and CEO of Aperture Technologies. "We have witnessed strong demand for our Aperture VISTA product as the market matures and organizations across all industry sectors recognize the need to manage the new and ever-changing physical landscape of the data center. Customer acceptance of our solution in this quarter only further cements our market leadership position, and we look forward to continued momentum throughout 2006."

Industry leading organizations in banking, health care and telecommunications have selected Aperture's VISTA product to reduce operational risk and improve efficiency through the visual management of the data center. To support this growth, in 2006 alone, Aperture has opened offices in Atlanta, Boston, Phoenix, Raleigh, New Jersey and Toronto.

In addition to growth in revenue and geographic presence, Aperture's Director of Product Architecture, Aman Khan, presented at the industry leading event, AFCOM Spring 2006 Data Center World. Mr. Khan spoke about best practices in managing a world-class data center. Khan and Harold Feinleib, Founder and Vice President of Product Development, have also been selected to speak at the upcoming 7x24 Exchange Spring Conference in Orlando, FL.

About Aperture

Aperture is the leading provider of enterprise software solutions that enable organizations worldwide to manage the physical infrastructure of their data centers. Aperture solutions automate and facilitate standardized best practice processes to manage the complexity and ever-changing conditions in today's enterprise data centers and to deliver world-class performance in IT operations. With Aperture, organizations worldwide have reduced operational risks, increased efficiency and generated actionable information to make better business decisions.
