Aperture Technologies Realizes Record Revenue for Fiscal Year 2006

Exceptional demand from Fortune 1000 enterprises drives significant sales of Aperture's VISTA 400 data center management product

Stamford, CT – July 25, 2006 – Aperture Technologies, Inc., the leading provider of enterprise software solutions that enable organizations worldwide to manage the physical infrastructure of their data centers, today announced record earnings for its fiscal year ending June 2006, marking exponential growth in revenue. The Company satisfies the critical need for IT infrastructure solutions that enable companies to gain control of complex data center environments. As an innovator in the field, Aperture has gained a foothold in the market, generating record revenues and increasing VISTA sales by nearly 100 percent. Currently, Aperture VISTA® is used to manage over two million square feet of enterprise data center space within Fortune 100 companies.

"The data center is the cornerstone of the enterprise – and it is under stress. The growth in the number of applications, the number and density of servers and storage arrays have turned facilities management into a high-stakes specialty," said Andreas M. Antonopoulos, senior vice president and founding partner, Nemertes Research. "We have reached a transformation point in the data center with broad adoption of technologies such as virtualization and blade servers and the expectation for one hundred percent availability. Managing, forecasting and planning for the data center facilities thus becomes a critical IT activity."

According to AFCOM's Data Center Institute, during the next five years, power failures and limits on power availability will halt data center operations at an alarming 90 percent of companies. Aperture VISTA will help to prevent this problem. Technologies to manage data center reliability are now a business essential and the world's largest companies are turning to Aperture. The Company has recognized the burgeoning demand for software that allows enterprises to manage, control and gain visibility into the physical infrastructure of the data center. With the introduction of its VISTA 400 product in 2005, the company has experienced explosive growth, particularly among government, healthcare and financial services organizations.

In August 2005, Aperture appointed a new chairman and chief executive officer, William T. Clifford, and expanded operations globally to keep up with the demand for its offerings. Aperture counts many of the world's largest companies among its customers, and has increased VISTA license revenues by nearly 100 percent in the past year. Aperture is poised for continued record growth as the world's leading companies turn to VISTA to manage the physical elements, such as heating, cooling and power, of their mission-critical data center operations.

"We are very proud and gratified to announce the strong financial results of fiscal year 2006," Aperture Chairman and CEO Clifford said. "Aperture was an early innovator in developing software solutions that simplify today's highly complicated data center environments. It is rewarding to have this vision realized, and to have our VISTA product embraced as the leading solution in the market."
