Aperture Technologies to Provide Visibility, Control Over Physical Environment of Unisys Government Transformation Center

Stamford, CT, June 12, 2006 – Aperture Technologies Inc., the leading provider of enterprise software solutions that enable organizations worldwide to better manage the physical infrastructure of their data centers, today announced that Unisys Corporation (NYSE: UIS) is using the Aperture VISTA™ solution at the Unisys Government Transformation Center (GTC). The GTC is located near the Reston, Va., Global Public Sector headquarters of Unisys, a worldwide systems integrator specializing in information technology services and solutions for public and private sector customers. Unisys GTC selected Aperture VISTA to help ensure their clients' successes and to differentiate themselves in the marketplace.

The GTC is a combination of facilities, solutions and services strategically designed to address the complexities of technology services in the government marketplace and provide government clients with easy access to full lifecycle managed services. The GTC is dedicated to helping the government in its IT challenges, providing a center where its clients can have critical projects developed in a secure and highly managed environment with the utmost attention to detail. Aperture's technology plays a crucial part in that environment.

"After seeing a demonstration of Aperture VISTA's capabilities, Unisys knew that managing the physical elements of the GTC was the first step necessary before purchasing and implementing any other technologies," said John O'Neill, Vice President, Enterprise Computing Services, Unisys. "Because of Aperture VISTA's clear visibility into the data center, Unisys can give clients the security and assurance necessary when investing millions of dollars in a project."

Reg Overman, Director, Strategic Channel Partners, Unisys, added, "With VISTA, we have the ability to deliver reports to our customers that detail the physical infrastructure and how it is performing - a true differentiator for us."

Since the GTC incurs more change than most data centers, there is a critical need for security and reassurance as well as a constant view into the hosting environment. Aperture VISTA shows this environment and delivers the control Unisys requires through a visual data management tool. Unisys has visibility into all the elements and assets contained in a data center such as power, heating, cooling, storage, and also the equipment, such as servers.

With Aperture VISTA, Unisys can track what projects are running, how they are running and keep asset inventory. Essentially, it is a complete mechanism for managing information on all physical elements, acting as a central repository for Unisys' GTC. Unisys can also run a physical audit in a matter of minutes to produce to its customers, a process which could take up to months without a tool such as Aperture VISTA.

“We were excited to work with Unisys in such a critical business environment and be the first actual application put into their data center. Our technology, at its core, helps manage their assets, providing visibility into the performance of those assets,” said Bill Clifford, Chairman and CEO of Aperture Technologies. “Unisys now has the ability to document everything from square one ensuring the physical infrastructure of their data center is under control and this helps them to provide an additional layer of value to their customers.”

In addition to giving visibility and control, Unisys chose Aperture VISTA for its reporting capabilities and its bi-directional APIs into asset management tools, service contracts and other technologies from companies such as Peregrine/HP and Remedy/BMC. This ensures Unisys can create one interoperable framework and manage the constant change of its data center.

About Aperture VISTA

Aperture VISTA is an enterprise software solution which reduces operational risk and improves efficiency through the visual management of the data center. Aperture VISTA delivers the key processes that enable organizations to take control of an increasingly complex physical environment including equipment, space, power, environmental, network and storage. The world’s largest companies use Aperture VISTA to achieve substantial improvements in the quality, reliability and cost effectiveness of their infrastructure planning, design, provisioning, troubleshooting and analysis.

About Unisys

Unisys is a worldwide technology services and solutions company. Our consultants apply Unisys expertise in consulting, systems integration, outsourcing, infrastructure, and server technology to help our clients achieve secure business operations. We build more secure organizations by creating visibility into clients’ business operations. Leveraging Unisys 3D Visible Enterprise, we make visible the impact of their decisions – ahead of investments, opportunities and risks.
