

Aperture Technologies Thrives in Pharmaceutical and Healthcare Markets

Leading healthcare visionaries recognize value of solving data center infrastructure challenges

STAMFORD, CT, January 8, 2007 – Aperture Technologies Inc., the leading provider of enterprise software solutions that enable organizations worldwide to manage the physical infrastructure of their data centers, today announced that more than 10 pharmaceutical and health care institutions, including several Fortune 1000 and Global 500 organizations, have selected the Aperture VISTA® product to manage their data centers more efficiently.

Healthcare and pharmaceutical companies are faced with a unique set of IT infrastructure challenges. IT managers are tasked with managing vast amounts of data, controlling multiple heterogeneous systems, and ensuring compliance with regulatory mandates. This puts immense pressure on the data center infrastructure. Aperture has gained significant traction in these markets by delivering tools that make these mission-critical environments more efficient. Its flagship product, Aperture VISTA, reduces operational risk through the visual management of the data center. Aperture VISTA delivers the key processes that enable organizations to take control of an increasingly complex physical environment, including equipment, space, power, network and storage issues.

“We are in the business of providing excellent patient care and therefore, it is critical our systems are always up and running. As our processing requirements increased exponentially in recent years, we needed advanced tools to track and manage the stresses on our data center,” said Jim Wallace Manager of Computer Operations of Evanston Northwestern Healthcare. “Aperture VISTA gives us the control we needed over our data center as well as a clear view into the physical aspects affecting its performance and an ability to respond to challenges as they arise.”

Customers in the healthcare and pharmaceutical space that are currently using Aperture’s VISTA product include Pfizer, Evanston Northwestern Healthcare, National Institutes of Health, UPMC Health Systems and Vanderbilt University Medical Center.

“Most businesses face complexities arising from distributed computing environments,” said Bill Clifford, Chairman and CEO of Aperture Technologies. “In the healthcare environment, these issues are intensified due to the critical nature of the data being managed. It’s rewarding to see so many prominent health care and pharmaceutical businesses having the foresight to deploy Aperture VISTA not only to protect against system outages but to manage for future growth.”

Aperture VISTA is an enterprise software solution which reduces operational risk and improves efficiency through the visual management of the data center. Aperture VISTA delivers the key processes that enable organizations to take control of an increasingly complex physical environment including equipment, space, power, environmentals, network and storage. The world’s largest companies use Aperture VISTA to achieve substantial improvements in the quality, reliability and cost effectiveness of their infrastructure planning, design, provisioning, troubleshooting and analysis.
