

## Fujitsu Services equips new £44m London data center with Aperture VISTA

*Aperture Technologies provides its biggest UK client with VISTA 400/500 for greener, more efficient, cost-effective infrastructure management at its state-of-the-art new data center site*

**Stamford, CT - June 25, 2008** - Aperture Technologies, the leading global provider of software for managing the physical infrastructure of data centers is providing Fujitsu Services, with comprehensive Aperture VISTA infrastructure resource management technology for its new £44million data centre near London, in the UK.

Bill Clifford, chairman and CEO of Aperture Technologies said: "Aperture VISTA has the power to change the way businesses run their data centers and that includes Fujitsu Services, our biggest customer in the UK. Existing VISTA support will now be expanded across the new data center to ultimately form part of a company-wide upgrade to VISTA 500, providing even greater insight into management of physical resources and data volumes as well as enhanced energy efficiency and environmental functionality."

Fujitsu Services' new 90,000 square foot data centre has been built on a brown-field site in on the northern outskirts of London using the very latest environmental features, allowing customers to overcome their data centre capacity problems while remaining as green as possible. The new data centre has been designed to minimise the use of electricity and achieve an inherently low carbon footprint coupled with greater efficiency gained through Fujitsu's IT Optimisation programme which included the deployment of Aperture VISTA, will save the equivalent of 10,000 tonnes of carbon dioxide each year.

Chris Flanagan, Data Center Development Manager of Fujitsu Services said: "Efficient auditing and management of a data centre facility of this size and complexity demands Aperture, a tool that is focused and dedicated to the task. It is vital that we extract maximum value from our data centers. Obviously we need our services to be resilient, reliable and cost-effective for end customers, but we must also fulfill compliance and regulatory obligations as well as enhancing our increasingly impressive green credentials."

"Aperture not only enables us to ensure efficient infrastructure and capacity management, but also to construct data centre facilities that are balanced in terms of power consumption. In any given data center, 30-40% of running costs can be attributed to electricity consumption. As energy is one of the few variable elements over which we have control, it can make a difference to customer costs as well as the environment if we can streamline equipment usage. Some government contracts even stipulate certain standards of energy efficiency."

Aperture VISTA is a comprehensive, holistic data center infrastructure resource management system that revolutionizes the way companies manage today's increasingly complex data center environments. By presenting the data center visually, Aperture VISTA enables managers to drill down to room, rack and server level regardless of their location, giving IT executives and managers an unprecedented level of control over physical assets such as space, power and cooling. Because it includes power, workflow and integration to other applications, VISTA also eases the configuration management complexities that threaten the viability of today's data centers.

Fujitsu Services is also trialing Aperture's standalone Environmental Monitoring module, which Aperture hopes to one day fully integrate into VISTA along with a number of other environmentally efficient technology developments in the pipeline.

#### **About Fujitsu Services**

Fujitsu Services is one of the leading IT services companies in Europe, Middle East and Africa. It designs, builds and operates IT systems and services for customers in the financial services, telecom, retail, utilities and government markets. Its core strength is the delivery of IT infrastructure management and outsourcing across applications, desktop, networking and data centre environments, together with a full range of related services, from consulting through to systems integration and deployment.

#### **About Aperture**

Aperture is the leading global provider of software for managing the physical infrastructure of data centers. Aperture's solutions reduce operational risk and improve efficiency through the planning and management of data center resources and real-time monitoring of the environment. Aperture delivers the best practice processes that enable organizations to take control of an increasingly complex physical infrastructure including equipment, space, power, cooling, network and storage.

With over 20 years of experience, Aperture provides organizations with the information required to optimize their data center operations, delivering better services at the lowest cost. Aperture's customers include the world's largest companies, half of which are Fortune 1000 and Global 500 organizations.
